---	---

A. GET YOUR MP4-PLAYER READY

A.1. Charge the battery

Before you bring your player into service, you have to charge the battery.

For this procedure you have to connect the MP4-Player to a power source with the USB-cable (socket B). As a power source, you can use a free USB-port of your computer or just connect the USB-cable with the adapter to your power socket.

A.2. Turn on / off the player

Push the ON/OFF-Button to the position ON or OFF

Press the "Power-Button" (6) continuously until the animated picture appears in the display.

Press the „Power-Button" (6) continuously until the Player turns off.

A.3. Speaker (this feature depends on the model)

Just unplug your earphones to listen the sound via the speaker. Notice: you can't listen to radio if you are using this function because the earphone is also working as antenna.

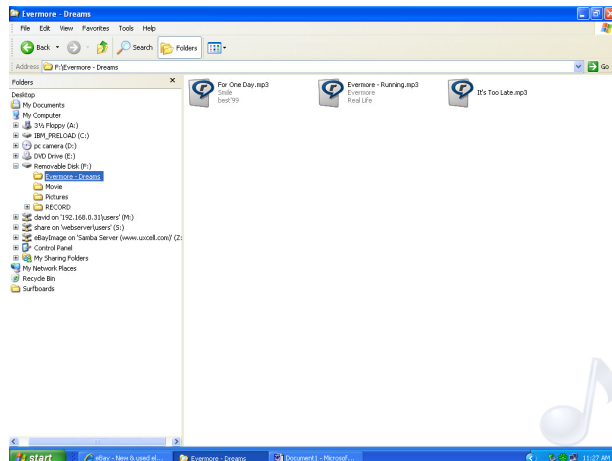

B. SAVE SONGS, VIDEOS AND PICTURES ON YOUR MP4-PLAYER

Before you can download files - you have to turn on and connect the player with your computer via the USB-cable. After the connection several seconds - Windows will recognize the player as a removable disc drive (the speed of the recognition depends on the performance of your computer). After your computer has recognized the player, please follow the next steps:

1. Open the Windows-Explore (mouse arrow on "Start" and press the right mouse button; move the mouse arrow to Explore and click the left mouse button).
2. Now you can see in the Explore an additional removable disc drive in the left column "FOLDER" (D: E: or F: - depending on the number of drives you have installed in your computer) which is your MP4-Player.
3. To copy a file from your hard disc – you have to select the music file or files of your choice at first. Afterwards you can move those files via "Drag and Drop" or via "Copy and Paste" to your player (removable disc drive).
4. Please, make sure that you NEVER disconnect the player during the data transfer. Otherwise, it will damage the memory chip of the MP4-Player.
5. If you like to group your files - like album, artist, pictures etc. – you can create folders on your MP4-Player with the Explore (File/New/Folder). Please, get sure that the folder contains no subfolders and that there aren't more than 99 files saved in each folder on the player.

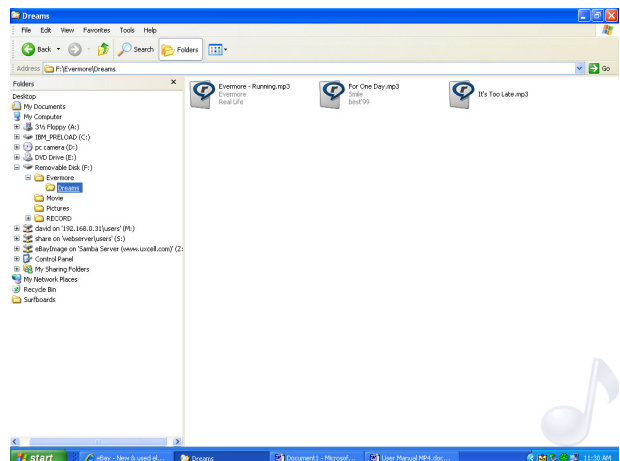

Correct (one folder for max. 99 files)

F:\Evermore-Dreams*.mp3 ...

Wrong (files in a subfolder of the folder)

F:\Evermore\Dreams*.mp3 ...

Please notice that the Player just supports the following music file formats:

- MP3, WMA

Information's how to convert music files from an audio CD etc. to an MP3-file and handle the copy protection of WMA-files will you find on our www.uxcell.com website (FAQ/Download).

Troubleshooting: If you find it hard to download files from PC or “format error” appears, you need to format your MP4 flash memory to solve it, before you format memory, you must back up your files and then choose “format”, a window bounce up and choose file system: FAT (not FAT32), after formatting, you can download files to your player easily!!!

C. FUNCTIONS AND DISCRIPTION OF THE SUBMENUS

C.1. Music

To get access to the Menu “Music“, you have to press the button “OK“(a6) once. Now the last played tile will play automatically. Press “OK“(a6) once to pause the music, then press “ESC”(a4) to exit the “Music”
